Plant Description	<p>The succulent herb kalanchoe has thick, water-retaining leaves. It often reaches a height of 30 to 50 cm while standing upright. Certain species, such as <i>K. pinnata</i>, have tiny plantlets growing along the margins of their green, occasionally scalloped leaves. Brightly colored flowers, usually red, pink, yellow, or orange, are tubular and arranged in clusters on erect stalks. The plant favors loamy soil that drains well and warm climates. Its anti-inflammatory and wound-healing qualities make it a popular decorative that is also utilized in traditional medicine.</p>
